Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-25, drawn to a process of homogenizing a raw sample, classified in class 264, subclass 140.

II. Claims 26-55, drawn to a process of palletizing a raw sample, classified in class 264, subclass 109.

III. Claim 56, drawn to a solution for binding a ground sample, classified in class 528, subclass 87.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination requires an epoxy, while the subcombination does not require an epoxy. The subcombination has separate utility such as a mixture for casting, extrusion or injection molding.

3. Inventions I, II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another and materially

different product or (2) the product as claimed can be used in another and materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in another and materially different process such as a process of casting, extrusion or injection molding.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
